

Carbon Monoxide Poisoning PSA (:30)

There's a killer out there - invisible and silent.

Carbon monoxide is a colorless, odorless gas.

It can kill you in minutes - but *you* can prevent it.

Have your furnace serviced professionally every year.

Never run a vehicle or generator in your garage – even with the door open.

Keep generators at least twenty-five feet away from windows, doors, and vents.

And use a CO detector. Change the battery every spring and fall when you change your clocks.
