

PSA (Anons Sèvis Piblik): Tretman pou sentòm kolera (Treatment for Cholera Symptoms PSA)

Haitian Creole:

Kolera se yon maladi grav ki kapab touye ou si w pa jwenn bon jan tretman touswit. Ou kapab gen kolera si w gen dyare. Si w gen dyare se pou ou al nan yon klinik touswit. Se pou ou kòmanse bwè Solisyon Rehidratasyon Oral touswit si li disponib, sinon bwè dlo ki pwòp. Dlo pwòp se dlo ki bouyi oswa ki trete avèk klòrox. Eseye bwè yon ti gout dlo pwòp chak de-twa minit toutotan ou gen dyare.

English:

Cholera is a very serious illness that can kill you without immediate, proper treatment. You may have cholera if you have diarrhea. If you have diarrhea you should go to the clinic immediately. You should also start drinking Oral Rehydration Solution (ORS) immediately if it is available, otherwise drink safe water. Safe water is water that has been boiled or treated with chlorine. Try to sip safe water every few minutes as long as you have diarrhea.
