

National Cholesterol Month PSA (:30)

You use numbers every day — your phone, your zip, even your PIN. But knowing your cholesterol numbers can help save your life.

Thirty-four million adults in the U.S. have high cholesterol, but many of them don't know it. Do you know your numbers?

Your doctor can do a simple test to check your cholesterol levels and help you make choices that lower your risk for heart disease and stroke.

September is National Cholesterol Education Month. Visit www.cdc.gov/cholesterol to learn more.

A message from CDC.
