

Preventing Tetanus After a Disaster PSA (:30)

This is an important message from the U.S. Department of Health and Human Services.

When cleaning up after a disaster, be careful of cuts and wounds. To prevent infection, including tetanus, clean all cuts and wounds with soap and clean water, use antibiotic ointment, and cover. If a wound swells or drains, seek medical attention immediately.

To learn more, call 1-800-CDC-INFO.
